

“Smart” Telematics App From Prime Technology Group

Create a faster, low-cost way of doing business with Prime’s **Xemplar** telematics solutions. You can put your customer’s safety first while improving data collection and customer engagement points with our telematics. Prime’s telematics systems enables fast and efficient two-way communication between insurers and customers.

Using our mobile app **Xemplar**, a telematics system, you can save money on hardware and infrastructure costs. Our system is compatible with any mobile device or tablet and will provide you with business critical information that can reach drivers instantly.

With **Xemplar**, you will now be able to measure your customers’ driving statistics while protecting your policies, loss ratio, and your company. Our telematics app enables customers to transmit their driving data to the insurance company without negatively affecting their current policy.

Prime’s **Xemplar** telematics app will also alert drivers of poor traffic conditions, traffic alerts, and track their location and speed on their mobile device or tablet

Our Functional Features:

- Cloud Framework as a Service
- Dynamic User Interface
- Easy Customization
- FNOL Claims Filing
- Integrate with Analytics
- Product/Policy Configuration

The price of telematics operations has gone down, which means your insurance company can take advantage of Prime’s market solutions to increase your consumer engagement and incentivize your policy holders to reduce dangerous driving behaviors.

A Smart Telematics That Works For You:

- Customized telematics solution
- Stream relevant data that directly impacts underwriting
- Stay connected with customer social media
- Acquire organized data with no infrastructure investment
- Secure functions for personal and commercial applications
- Apply predictive analytics to maximize data points
- Promote positive outcomes
