

Nursing a patient back to health can be a long, financially demanding process; especially when a patient requires numerous consultations or follow up appointments. Fortunately, Prime's Patient Portal technology is working to curtail this existing process, giving both healthcare providers and their patients access to valuable medical data whether they are at home or on the go; no doctor's office needed.

With only a few clicks on a desktop computer, tablet, or mobile device, a patient can gain access to a variety of features including:

- Wellness Management- a guide to living a healthier lifestyle via diet and exercise
- Personal Health Record
 - Birth History, Emergency Contact, Allergies, Immunizations, Lab Results, Medications, and Patient Forms
- Health Risk Assessment
- Telemedicine- a communication tool to engage patient with physician

Data stored in this system can connect with multiple EHRs and PBM systems simultaneously, and Prime's customizable framework allows healthcare systems to cater Patient Portal to best serve their clients' needs.

Beyond this, Prime's Patient Portal allows for direct patient-physician engagement, regardless of physical location. A physician can access a patient's electronic profile and communicate with them via video chat, even going so far as to put the patient in contact with a specialist that is better equipped to assist the patient. Whether that specialist is five minutes down the road or 5,000 miles away, with Prime's Patient Portal, there is no reason why patients cannot obtain the absolute best consultation/treatment method for their condition.

Other benefits that Prime's Patient Portal has to offer include:

- EHR agnostic patient portal works with any existing software
- Better medication adherence and reconciliation
- Customizable patient care reports with notifications
- Online bill pay and financial management tools
- Mobile responsive design for Tablets and Smartphones
- Custom intake forms deposited to your EHR
- Patient surveys and patient-centered data reporting

With nearly all the capabilities of a standard doctor's visit available to the patient, from consultation to paying for their prescription, Prime's Patient Portal meets Stage 1 and Stage 2 Meaningful Use Criteria while remaining HIPPA compliant.

Providing and receiving much needed patient assistance does not have to take weeks according to an appointment by appointment basis. With Prime's Patient Portal, your healthcare system can start saving more lives in a more efficient and effective manner.

The future of providing healthcare is at your fingertips.
