

## Ready for an EHR solution that is affordable?

The Healthcare industry continues to see high levels of consolidation activity in order to support changing market dynamics and if you haven't already purchased your EFR solution, you should Prime Technology HMS Solution.

In addition to the usability and interoperability challenges surrounding the use of EHRs, small to medium sized physicians like you are facing a nascent fear with respect to meaningful use requirements and beyond. Several practitioners are also complaining about compliance, work flow issues and data encryption.

According to recent survey, 93% of doctors wanted their practice management software to do charting, billing, scheduling, and fully integrated with existing systems. 94% of these respondents cited patient scheduling as the most necessary application and 89% of physicians wanted an electronic health record (EHR) application as part of their Practice Management software.

We are aware of the challenges today to control costs, improve cash flows and still take care of their patients. However, for many physicians and healthcare leaders, there is not enough time, resources and funds to offset reimbursement reductions, regulatory audits and technology advances to deliver high-quality, patient-centered care.

Prime Technology Group has been building highly functional and fully integrated Healthcare Management System (HMS) that meet not only the general needs of any practice, but also the specific needs of specialty and sub-specialty practices. Our HMS solutions are fully compliant with HIPAA security, HL7 messaging, and ONC certification standards.

### Prime's highly scalable Healthcare Management System Framework provides:

- Practice Management
- Electronic Medical Record
- Patient Portal
- eTeleHealth – independent module supporting Tele-Health and Tele-Medicine initiatives
- Wellness Platform

### Prime's Healthcare Management System Framework Includes:

Customizable modules, Cloud hosted deployment, Mobile Device ready seamless integration with existing applications.

### Other benefits that Prime's Patient Portal has to offer include:

- Cloud technology
- Reduction of Development Time
- Customizable workflow
- Fast to market
- Easy integration, Scalable

Delivering **successful, Reliable, Cost-effective** solutions
